

FIELD GUIDE

MOMENT PRO CAMERA II WITH VSCO

CAMERA PRESET SERIES

Two saved profiles. Both aim for the flattest, highest-latitude file so VSCO's film presets and tools shine instead of fighting baked-in processing. Shoot RAW where you can; **Natural + Keep RAW** is the lightweight fallback.

GENERAL USE

EVERYDAY · SET & FORGET

PROCESSING	ProRAW (Flexible) Storage-saver: Natural · Minimal + Keep RAW ON
DYN. RANGE COMP.	Minimal Only applies in Natural / HEIF
RESOLUTION	12 MP Natural caps at 12 MP
ASPECT	4:3 (full sensor) Crop in VSCO · Golden is a creative choice
WHITE BALANCE	AWB Fully recoverable on RAW — fix later
EXPOSURE (EV)	-0.3 Light highlight protection
ISO	Auto · low ceiling Lock to ~64 only in bright light; let it rise in shade / indoors
SHUTTER	Auto
FOCUS	AF
LOOKS / LUT	Off Never stack onto a VSCO preset
MONITOR	Histogram / Zebras on

BRIGHT SUN · PORTRAIT

HIGH CONTRAST · SKIN

PROCESSING	ProRAW (Flexible) Need the dynamic range here
DYN. RANGE COMP.	Medium If shooting Natural / HEIF instead
RESOLUTION	12 MP
ASPECT	4:3 (full sensor)
WHITE BALANCE	AWB Or ~5500–6000K manual for warm preview
EXPOSURE (EV)	-0.7 Expose for skin highlights , not shadows
ISO	~64 (base) Bright light lets you lock the clean base ISO
SHUTTER	Auto Fast in sun = sharp handheld
FOCUS	AF on the eyes
LOOKS / LUT	Off
MONITOR	Zebras ON Pull EV down till lit cheek/forehead stops flashing

CONTROL MAP

Where each setting lives on the shooting screen.

1 TOP BAR

Tap to open **Processing** • **Codec** • **Resolution** • **Aspect**. ProRAW lives under the Processing zone.

2 SETTINGS (GEAR)

Turn on **histogram** / **zebras** so the EV protection is informed.

3 AWB

White balance — leave on AWB for both presets.

4 EV DIAL

Exposure compensation. Set **-0.3** general • **-0.7** bright sun.

5 SS • EV • ISO

Live exposure readout. ~64 in bright light; let ISO rise in shade.

6 A / M

Auto vs Manual exposure. Auto is fine; go Manual only when intentional.

THEN IN VSCO

GENERAL

LIGHT TOUCH

Apply a film preset (Fuji / Kodak-leaning pack) at ~7–8 strength. Nudge contrast and add a touch of grain to taste. The RAW file rarely needs recovery work.

BRIGHT SUN

RECOVER FIRST

Highlights **down**, Shadows **up**, Contrast **down**, Temp slightly warm for skin. *Then* apply the film preset at reduced strength so it doesn't undo the recovery.

MANUAL EXPOSURE • PRORAW

ISO ↔ shutter. Aperture is fixed, so the two trade off. Drop ISO and the shutter must slow to hold brightness — here ISO 320 sits at 1/60. In **Manual (M)**, set ISO as low as the light allows, then rebalance with SS.

Fusion. With ProRAW, choose **Disable Fusion** (or **Minimal SDR**) for the flattest single-exposure file; use Allow Fusion / Highest HDR only when you want computational dynamic range.

BRIGHT SUN - IN VSCO

Recover the file first — then add the look. Numbers match the controls shown.

1

EXPOSURE

Set base brightness; ease down if the whole frame runs hot.

2

CONTRAST

Pull down — midday sun already adds plenty of punch.

3

TONE

Highlights down to save the lit cheek; Shadows up to open the shade.

4

WHITE BAL.

Under COLOR — warm the Temp slightly for natural skin.

5

DODGE & BURN

Optional — lift the shadow side or knock back a hotspot locally.

FINISH WITH THE LOOK

6

PRESET

Apply a Kodak / Fuji-leaning film preset, then dial strength back to ~7–8 so it doesn't undo the recovery. **FOR THIS PHOTO** surfaces presets suited to the shot.

Histogram check: in bright sun the highlights stack against the right edge — ease Exposure / Highlights down until they pull off the wall before they clip.
